

SPECIFICATIONS FOR ALLBONDS™ FR ALUMINUM COMPOSITE MATERIAL

PART 1: GENERAL 1.01 -- SCOPE

1. SECTION INCLUDES

1. The extent of panel system work is indicated on the drawings and in these specifications.
2. Panel system requirements include the following components:
 - i. Aluminum-faced composite panels with mounting system. Panel mounting system including anchorages, shims, furring, fasteners, gaskets, and sealants, related flashing adapters, and masking (as required) for a complete watertight installation.
 - ii. Parapet coping, column covers, soffits, sills, border, and filler items indicated as integral components of the panel system or as designed.
 - iii. Interior panel system work that basically matches exterior panel system work.

2. RELATED DOCUMENTS

Drawings and general provisions of the Contract, including General and Supplementary Conditions, Division 1 Specification Sections, and Technical Specification Divisions 2 through 16 apply to this Section.

3. RELATED WORK SPECIFIED ELSEWHERE

1. Section 05100:
2. Section 06100:
3. Section 07200:
4. Section 07600:
5. Section 07920:
6. Section 09200:

1.02 - QUALITY ASSURANCE

Structural steel

Back-up walls

Insulation

Metal flashing and counter flashing Caulking and sealants

Interior wall finishes

1. Composite Panel Manufacturer shall be responsible for both panel manufacture and a finish that is factory applied on a continuous process, coil-coat paint line.
2. Fabricator/installer shall have a minimum of three (3) years' experience of metal panel work similar in scope and size to this project.

3. Field measurements should be taken prior to the completion of shop fabrication whenever possible. However, coordinate fabrication schedule with construction progress as directed by the Contractor to avoid delay of work. Field fabrication may be allowed to ensure proper fit. However, field fabrication shall be kept to an absolute minimum with the majority of the fabrication being done under controlled shop conditions.
4. Shop drawings shall show the preferred joint details providing a watertight and structurally sound wall panel system that allows no uncontrolled water penetration on the inside face of the panel system as determined by ASTM E 331. Systems not utilizing a construction sealant at the panel joints (i.e. Rout and Return Dry and Rear Ventilated System) shall provide a means of concealed drainage with baffles and weeps for water which may accumulate in members of the system.
5. Maximum deviation from vertical and horizontal alignment of erected panels: 6mm (1/4") in 6m (20') non-accumulative.
6. Panel fabricator/installer shall assume undivided responsibility for all components of the exterior panel system including, but not limited to attachment to sub-construction, panel to panel joinery, panel to dissimilar material joinery, and joint seal associated with the panel system.
7. Composite panel manufacturer shall have established a Certification Program acceptable to the local Code Authorities.

1.04 – SUBMITTALS

1. SUBMITTALS SHALL BE IN CONFORMANCE WITH SECTION ____.
Include section number of Division 1, which outlines administrative procedures for submittals. Refer to CSI Division 1, Section 01340 – Shop Drawings, Product Data, and Samples.
2. SAMPLES
 1. Panel System Assembly: Two samples of each type of assembly. 304mm (12") v 304mm (12") minimum.
 2. Two samples of each color or finish selected, 76mm (3") x 102mm (4") minimum.

3. SHOP DRAWINGS

Submit shop drawings showing project layout and elevations; fastening and anchoring methods; detail and location of joints, sealants, and gaskets, including joints necessary to accommodate thermal movement; trim flashing; and accessories.

4. AFFIDAVIT CERTIFYING MATERIAL MEETS REQUIREMENTS SPECIFIED.

5. TWO COPIES OF MANUFACTURER'S LITERATURE FOR PANEL MATERIAL.
6. CODE COMPLIANCE

Documents showing product compliance with the national and local building code shall be submitted prior to the bid. These documents shall include, but not be limited to, appropriate Evaluation Reports and/or test reports supporting the use of the product.

7. ALTERNATE MATERIALS MUST BE APPROVED BY THE ARCHITECT TEN DAYS PRIOR TO THE BID DATE.

1.05 - WARRANTY

1. The fabricator and installer will warrant the wall system for a period of one (1) year that the fabrication and installation workmanship will be free from defects.
2. The aluminum composite material manufacturer shall warrant for a period of twenty (20) years against Max 5 fade based on ASTM D2244 and Max 8 chalk based on ASTM D4212 and delamination of the paint finish.
3. The aluminum composite material manufacturer shall warrant for a period of ten (10) years that the material will be free from defects including delamination.

1.06 - DELIVERY, STORAGE, AND HANDLING

- A. Protect finish and edges in accordance with panel manufacturer's recommendations.
- B. Store material in accordance with panel manufacturer's recommendations.

PART 2: PRODUCTS 2.01 - PANELS

A. COMPOSITE PANELS

1. ALLBONDS™ material manufactured by ALLBONDS™ (insert address here).
2. Items of the same function and performance, which have received ten (10) day prior approval from the architect, shall be allowed for this project. Approval shall be based on documentation submitted showing the adequacy of the material. Products must be made in the USA. Fill in Division 1 - General Requirement section numbers covering administrative procedures for substitutions or delete if substitutions are not permitted.

B. THICKNESS: 3MM (0.118"), 4MM (0.157"), AND 6MM (0.236")

C. PRODUCT PERFORMANCE

1. Bond Integrity

When tested for bond integrity, in accordance with ASTM D1781 (simulating resistance to panel delamination), there shall be no adhesive failure of the bond a) between the core and the skin nor b) cohesive failure of the core itself below the following values:

Peel Strength:

178 N mm/mm (40 in lb/in) as manufactured

178 N mm/mm (40 in lb/in) after 21 days soaking in water at 70 degrees Fahrenheit 2.

Fire Performance

ASTM E 84 - Flame Spread Index must be less than 25; Smoke Developed Index must be less than 450.

ASTM D 1929 - Spontaneous Ignition Temperature (SIT): the lowest temperature at which combustion initiate and continues in a substance when it is heated in the air

Flash Ignition Temperature (FIT): the lowest temperature at which vapors of the material will ignite when given an ignition source

ASTM E 119 - 1 hour and 2 hour fire exposure and subsequent exposure to a hose stream test

NFPA 285 - Panels shall meet requirements of the Intermediate Scale Multi Story Test

NOTE: If the Authority Having Jurisdiction (AHJ) requires 'as detailed' wall assembly test, a certified engineers report shall be considered sufficient

D. FINISHES

1. Coil-coated KYNAR® 500 or HYLAR® 5000-based Polyvinylidene

Fluoride (70% PVDF) tested in accordance with AAMA 2605. Corafon, Megafon, Lumiflon, or any version of FEVE resin paint systems will not be allowed.

a. Color: (Select one of the following)

1. Standard color as selected by the owner/architect/engineer from manufacturer's standard color palette.
2. Custom color to be matched by the panel supplier.

b. Coating thickness:

1. Colors: 1.0mil (±0.2mil).

2. Clear: 0.50mil (± 0.05 mil).

c. Hardness: ASTM D-3363; HD minimum using Eagle Turquoise Pencil.

d. Impact

1. Test method: ASTM D-2794; Gardner Variable Impact Tester with 5/8" mandrel.
2. Coating shall withstand reverse impact of 1.5" /pounds per mil substrate thickness.
3. Coating shall adhere tightly to metal when subjected to #600 Scotch Tape pick-off test. Slight minute cracking permissible. No removal of film to substrate.

e. Adhesion

1. Test method: ASTM D-3359.
2. Coating shall not pick off when subjected to an 11" x 11" x 1/16" grid and taped with #600 Scotch Tape.

f. Humidity Resistance

1. Test method: ASTM D-2247.
2. No formation of blisters when subject to condensing water fog at 100% relative humidity and 100 degrees Fahrenheit for 4000 hours.

g. Salt Spray Resistance

1. Test Method: ASTM B-117; expose coating system to 4000 hours, using 5% NaCl solution.
2. Corrosion creepage from scribe line: 1/16" max.

3) Minimum blister rating of 8 within the test specimen field.

h. Weather Exposure Outdoor:

1. Ten-year exposure at 45-degree angle facing south Florida exposure.
2. Maximum color change of 5 Delta E units as calculated in accordance with ASTM D-2244.
3. Maximum chalk rating of 8 in accordance with ASTM D-4214.
4. No checking, crazing, adhesion loss.

i. Chemical Resistance:

1. ASTM D-1308 utilizing 10% muriatic acid for an exposure of 15 minutes. No loss of film adhesion or visual change when viewed by the unaided eye.

2. ASTM D-1308 utilizing 20% sulfuric acid for an exposure time of 18 hours. No loss of film adhesion or visual change when viewed by the unaided eye.
3. AAMA 2605 utilizing 70% reagent-grade nitric acid vapor for an exposure time of 30 minutes. Maximum color change of 5 Delta E units as calculated in accordance with ASTM D-2244.

2.02 - PANEL FABRICATION

1. COMPOSITION

Two sheets of aluminum sandwiching a solid core of non-combustible mineral filled FR based material formed in a continuous process with no glues or adhesives between dissimilar materials. The core material shall be free of voids and/or air spaces and not contain foamed insulation material. Products laminated sheet by sheet in a batch process, or honeycomb type panels using glues or adhesives between materials shall not be acceptable.

2. ALUMINUM FACE SHEETS

Thickness: 0.50mm (0.0197") (nominal) Alloy: AA3000 Series (Painted material)

3. PANEL WEIGHT

4mm (0.157"): 1.60 lbs./ft²

6mm (0.236"): 2.24 lbs./ft²

4. TOLERANCES

1. Panel Bow: Maximum 0.8% of any 1828mm (72") panel dimension.
2. Panel Dimensions: Field fabrication shall be allowed where necessary but shall be kept to an absolute minimum. All fabrication shall be done under controlled shop conditions when possible.
5. Panel lines, breaks, and angles shall be sharp, true, and surfaces free from warp and buckle.
6. Maximum deviation from panel flatness shall be 1/8" in 5'0" on panel in any direction for assembled units. (Non-accumulative; no oil canning)

E. SYSTEM CHARACTERISTICS

1. Plans, elevations, details, characteristics, and other requirements indicated are based upon standards by one manufacturer. It is intended that other manufacturers, receiving prior approval, may be acceptable, provided their details and characteristics comply with size and profile requirements, and material/performance standards.
2. System must not generally have any visible fasteners, telegraphing or fastening on the panel faces or any other compromise of a neat and flat appearance.

3. System shall comply with the applicable provisions of the "Metal Curtain Wall, Windows, Storefront, and Entrance Guide Specifications Manual" by AAMA and ANSI/AAMA 302.9 requirements for aluminum windows.
4. Fabricate panel system to dimension, size, and profile indicated on the drawings based on a design temperature of 70 degrees Fahrenheit.
5. Fabricate panel system so that no restraints can be placed on the panel, which might result in compressive skin stresses. The installation detailing shall be such that the panel remain flat regardless of temperature change and at all times remain air- and water-tight.
6. The finish side of the panel shall have a removable plastic film applied prior to fabrication, which shall remain on the panel during fabrication, shipping, and erection to protect the surface from damage.

F. SYSTEM TYPE

Pick one of the following:

1. Rout and Return with Exposed Silicone Sealant
System must provide an exposed silicone seal (caulked) reveal joint as detailed on drawings. The sealant type shall be as specified in Section 07900 and with foamed type backer rod as indicated on architectural drawings.
2. Rout and Return Dry:
System must provide a perimeter aluminum extrusion with integral weather-stripping as detailed on drawings. (No field sealant required in joints unless specifically noted in drawings.)
3. Rear Ventilated Rain Screen: System must provide a reveal joint as detailed in drawings. Provide moisture barrier and sheathing as shown on drawings.
4. Pressure Equalized Rain Screen System. System must provide air/vapor barrier as indicated in AAMA 508- 05.

G. SYSTEM PERFORMANCE

1. Composite panels shall be capable of withstanding building movements and weather exposures based on the following test standards required by the Architect and/or the local building code.

1. Wind Load
If system tests are unavailable, mock-ups shall be constructed, and tests performed under the direction of an independent third-party laboratory, which show compliance to the following minimum standards:

Panels shall be designed to withstand the Design Wind Load based upon the local building code, but in no case less than 20 pounds per square (psf) and 30 psf on parapet and corner panels. Wind load testing shall be conducted in accordance with ASTM E330 to obtain the following results.

Normal to the plane of the wall between supports, deflection of the secured perimeter-framing members shall not exceed $L/175$ or $3/4"$, whichever is less.

Normal to the plane of the wall, the maximum panel deflection shall not exceed $L/60$ of the full span. Maximum anchor deflection shall not exceed $1/16"$.

At 1-1/2 times design pressure, permanent deflections of framing members shall not exceed $L/100$ of span length and components shall not experience failure or gross permanent distortion. At connection points of framing members to anchors, permanent set shall not exceed $1/16"$.

2. Air/Water System Test

If system tests are unavailable, mock-ups shall be constructed, and tests performed under the direction of an independent third-party laboratory, which show compliance to the following minimum standards:

Air infiltration: When tested in accordance with ASTM E283, air infiltration at 1.57 psf must not exceed 0.06 cfm/ft² of wall area.

Water infiltration: Water infiltration is defined as uncontrolled water leakage through the exterior face of the assembly. Systems not using a construction sealant at the panel joints (i.e. Rout and Return Dry and Rear Ventilated Systems) shall be designed to drain any water leakage occurring at the joints. No water infiltration shall occur in any system under a differential static pressure of 6.24 psf after 15 minutes of exposure in accordance with ASTM E331.

a. Pressure Equalized Rain Screen Systems shall comply with AAMA 508-05 Voluntary Test Method and Specification for Pressure Equalized Rain Screen Wall Cladding Systems

2.03 - ACCESSORIES

1. Extrusions, formed members, sheet, and plate shall conform with ASTM B209 and the recommendations of the manufacturer.
2. Panel stiffeners if required, shall be structurally fastened or restrained at the ends and shall be secured to the rear face of the composite panel with silicone of sufficient size and strength to maintain panel flatness. Stiffener material and/or finish shall be compatible with the silicone.

3. Sealants and gaskets within the panel system shall be as per manufacturer's standards to meet performance requirements.
4. Fabricate flashing materials from 0.030" minimum thickness aluminum sheet painted to match the adjacent curtain wall/ panel system where exposed. Provide a lap strap under the flashing at abutted conditions and seal lapped surfaces with a full bed of non-hardening sealant.
5. Fasteners (concealed/exposed/non-corrosive): Fasteners as recommended by panel manufacturer. Do not expose fasteners except where unavoidable and then match finish of adjoining metal.

PART 3: EXECUTION 3.01 - INSPECTION

1. Surfaces to receive panels shall be even, smooth, sound, clean, dry, and free from defects detrimental to work. Do not proceed with erection until unsatisfactory conditions have been corrected.
2. Surfaces to receive panels shall be structurally sound as determined by a registered Architect/Engineer.

3.02 - INSTALLATION

1. Erect panels plumb, level, and true.
2. Attachment system shall allow for the free and noiseless vertical and horizontal thermal movement due to expansion and contraction for a material temperature range of -20 degrees to 180 degrees Fahrenheit. Buckling of panels, opening of joints, undue stress on fasteners, failure of sealants or any other detrimental effects due to thermal movement will not be permitted. Fabrication, assembly, and erection procedure shall account for the ambient temperature at the time of the respective operation.
3. Panels shall be erected in accordance with an approved set of shop drawings.
4. Anchor panels securely per engineering recommendations and in accordance with approved shop drawings to allow for necessary thermal movement and structural support.
5. Conform to panel fabricator's instructions for installation of concealed fasteners.
6. Do not install component parts that are observed to be defective, including warped, bowed, dented, abraded, and broken members.
7. Do not cut, trim, weld, or braze component parts during erection in a manner which would damage the finish, decrease strength, or result in visual imperfection or a failure in performance. Return component parts which require attention to shop for prefabrication, if possible, or for replacement with new parts.

8. Separate dissimilar metals and use gasketed fasteners where needed to eliminate the possibility of corrosive and electrolytic action between metals.

3.03 – ADJUSTING AND CLEANING

1. Remove and replace panels damaged beyond repair as a direct result of the panel installation. After installation, panel repair and replacement shall become the responsibility of the General Contractor.
2. Repair panels with minor damage.
3. Remove masking (if used) as soon as possible after installation. Masking intentionally left in place after panel installation on an elevation shall become the responsibility of the General Contractor.
4. Any additional protection, after installation, shall be the responsibility of the General Contractor.
5. Make sure weep holes and drainage channels are unobstructed and free of dirt and sealants.
6. Final cleaning shall not be part of the work of this section.
